

TABLEWARE RANGE

ThermECO Range for Tableware

Endeka Ceramics Ltd. has been listening hard to what you, the customer is saying, about the significant issues affecting your economic and business performance today:

- ✦ Gas and electricity price increases of sixty five percent in one year
- ✦ Increased concern about the effect on the environment of burning fossil fuels
- ✦ Environmental taxation via the Climate Change Levy and EU ETS

Endeka Ceramics Ltd. has recognized the significant impact of both the environmental issues and the manufacturing costs on our customers. It is clear that the current situation is unsustainable, both environmentally and economically.

Therefore, in early 2004 Endeka Ceramics Ltd.UK embarked on a product development programme using our ThermoECO technology. For many years the ceramics industry has been aware that there were ways to reduce kiln-firing temperatures. However, until today these have always proven to be either uneconomic or detrimental to product quality.

With a solution to these issues, Endeka Ceramics Ltd.UK is proud to announce the launch of our new energy efficient, low temperature ThermoECO prepared body and glazes for sanitaryware:

ThermECO Fine China and Hotelware Glaze

A fully-fritted, unleaded transparent glaze system exhibiting an ultra-flat, high-gloss finish offering:

ISO 9001 - 2000 Registered Firm
Certificate Number: FM518117
